# CS Attendance Plus

What this app has that the official CS Attendance System app (v1.4.4, student side) does not

## New features in CS Attendance Plus

| Feature | What it does |
|---|---|
| **Dark mode** | System / Light / Dark theme, one-tap toggle on the home screen. The official app is light-only. |
| **Attendance tab** | One screen for all courses: overall ring, present/absent counts, per-course bars against the minimum, recent absences, and a calendar for any single course. |
| **What-if planner (per course)** | Every course has its own "if I miss N / if I attend N" calculator showing the resulting percentage. |
| **"Can I skip?" guidance** | Shows how many lectures you can still miss, or how many you must attend in a row to get back to the minimum, on the home screen, course list and course page. |
| **Adjustable minimum %** | Set your own attendance minimum (default 75%); warnings and bars follow it. |
| **Add your own timetable classes** | Add personal classes or activities with day, time and room. Stored on your phone only; never sent to the server. They appear in the timetable, today's list, PDFs and reminders. |
| **Class reminders with room** | Weekly notification 5/10/15/30 minutes before each class showing class name, start time, room and teacher. Works offline. |
| **Timetable PDF** | Download or share a day-by-day PDF of your week, including your own classes. |
| **Attendance PDF** | Course summary table with status ("can miss N" / "attend next N") plus a date-by-date lecture log, for all courses or one. |
| **GPA calculator** | Pick expected grades per course to see this semester's GPA and your projected CGPA; enter a target CGPA to see the GPA you need. |
| **Dashboard** | Greeting, overall attendance, CGPA, courses at risk, and today's classes marked Now / Next / Done. |
| **Attendance streak** | Counts how many lectures in a row you have attended. |
| **Offline cache** | Shows your last-seen data when there is no connection. |
| **Demo mode** | Explore the whole app with made-up data and no account. |
| **Installs side by side** | Separate package (lms.iotpro.plus), so it can sit next to the official app. |

## What the official app has that this app does not

| Feature | Status here |
|---|---|
| **Surveys** | **Not included** |
| **Teaching-assistant tools** | **Not included** |
| **Browse and enrol in courses** | **Not included** |
| **Academic calendar** | **Not included** |
| **Server push notifications (results, attendance marked)** | **Not included — needs the university's Firebase setup** |

| | |
|---|---|
| **Biometric sign-in** | **Not included** |
| **Grades sheet (DMC) PDF export** | **Grades are viewable here but not exported** |
| **Faculty and admin screens** | **Student side only** |

**How this was checked:** the comparison is based on analysis of the official v1.4.4 app's published code, covering its student screens. Items marked "not found" mean no sign of them was found there; a newer official version may differ. CS Attendance Plus is an unofficial client, has not been tested against the live server, and GPA figures are estimates on a standard 4.0 scale. Students cannot mark attendance in either app — only teachers and TAs can.
